RESPONSIBLE LUXURY

SMART BUILDING EFFICIENT LIVING

DESIGNING A BETTER LIFE

CO-CREATING THE FUTURE

The IGBC Green Building accreditation is a welcome move by our government for ensuring a greener future.

- 1. Conservation of water**
IGBC-certified building offers features like rainwater collection, water metering, irrigation system management, etc.
- 2. Conservation of energy**
Green buildings conserve 20-30% of the energy, ensuring a low carbon lifestyle.
- 3. Waste management system**
Reduce or reuse waste and throwaway items and organic garbage from homes.
- 4. Excellent daylighting**
With good ventilation and enough natural sunshine inside, you not only save on bills but also boost overall well-being.
- 5. Lower energy bills**
Green buildings ensure 15 and 20 percent power savings through solar, CFL, LED, etc.

Benefits of living in green homes:

- > Improved health from natural air circulation and filtering
- > Lower reliance on electrical items
- > Sustainable materials used in construction
- > Eco-friendly furnishings and interior design
